READINESS FOR EDUCATION AT A DISTANCE INDICATOR

Are Your Students READI for Distance Learning?

READI is a web-based, diagnostic tool that assesses students' likelihood for succeeding in an online learning program. READI indicates the degree to which an individual student possesses attributes that contribute to success in online learning, including: self-motivation, time-management skills, self-discipline, reading comprehension, persistence, availability of time, ability to use a laptop, printer, software, and the Internet.

READI does not rely on simple self-assessment questions with obvious "right" and "wrong" answers. Rather, through a sequence of activities READI measures the degree to which students possess the skills and traits needed for success in studying at a distance. Faculty and/or administration can view the student's scores using robust reporting features. READI is deployed through a custom user interface which has the look and feel of your school's website.

READI provides an immediate score and diagnostic interpretation of results to the student and to their school. The patent-pending process of READI includes five major assessment components that measure:

- (1) On-screen reading speed & comprehension
- (2) Technical competency
- (3) Individual attributes
- (4) Preferred learning styles
- (5) Typing speed and accuracy.
